User Story

- As a MARTA rider, I want to view stops so that I can determine which one is currently closest to me.

Detailed Work Tasks

- Access a map displaying the following:
1. Users current location
2. All MARTA bus stops
3. The distance to each bus stops from current location
4. All the routes for each stop
5. When each bus is arriving at each stop and which route it's on
- Directions to a chosen bus stop

Acceptance Scenarios

- When the user only wants to get on a certain route, only stops on that route should appear.
- Given a set of options, the user should be able to filter which stops are displayed based on their preferences

Done Done

- The user made it to their desired bus stop.
- The user had the option to provide feedback, and offer suggestions and improvements.
